

***MailProve is the leading anti-spam service provider in Asia. MailProve's Super Blacklist stops spam at source avoiding all the costs of bandwidth and system resources associated with receiving and dealing with spam on your email servers. You can enjoy this service for less than US\$1 a day.***

## Benefits for You

**All your mail proven before you receive it** - As the name implies, with MailProve nearly all email that arrives at your email server is proven, without affecting the performance of your connectivity, your email server or other systems.

**Efficient operations** - MailProve operates against spam sources which means that whenever the originating mail server requests to send an email, the IP address of the originator is checked against MailProve's Super Blacklist before the mail is received or stored on your mail server. Consequently spam never takes up bandwidth nor hard disk space on your mail server: it is stopped at source in the event that the IP address is contained in the blacklist. This is a highly efficient way of blocking the increasingly very high volume of spam.

**Company customisation** - Another feature of the Super Blacklist is company white-listing, which allows you to maintain a list of domain names that feature within the global blacklist from which you will accept emails e.g. receiving emails for marketing intelligence purposes. Addresses in your white-list will always override those in the Super Blacklist, so that email from desired sources will always get through to you. You can also create your own blacklist to supplement the Super Blacklist.

**Real-time 24x7 operations** - MailProve is a real-time service that operates 24 hours a day, 365 days a week, with no service interruption. A number of "back-

end" routines run 24x7 to ensure the Super Blacklist is updated in real-time without any interruption of service to you.

**Easy to implement** - There are no requirements for the deployment of hardware or software at your office. You just connect.

**No Administration** - The service provides automatic real-time protection against spam. There is no requirement for tuning by your administrator.

**Cost effective** - MailProve is a proven and simple solution for protecting your company from spam. It is priced competitively to suit the IT budgets of small and large businesses.

## Anti-Virus Protection

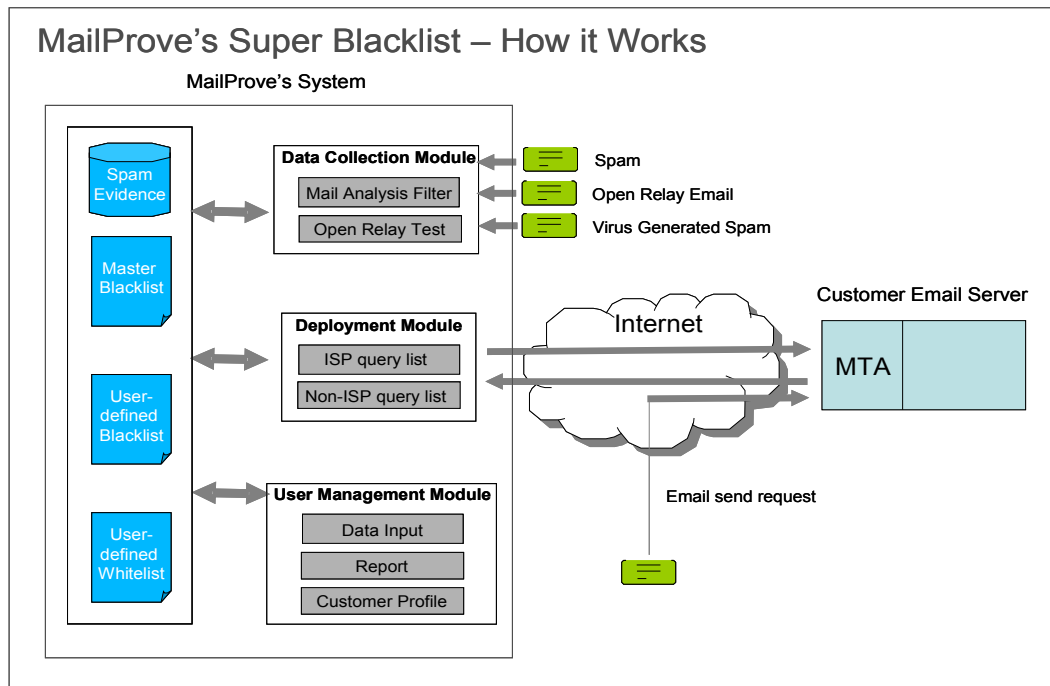

Email is increasingly the transmission vehicle for viruses and worms. Such is the volume of these now we are encountering "spam storms" that slow down your systems. MailProve's spam analysis engine also scans and detects viruses and worms and stops these at source. Due to our efficiency of stopping spam at source, we offer unique protection against the "spam storms" of viruses and worms hitting networks today.

## Block Asian Language Spam

MailProve not only blocks world-wide spam but also specializes in Asian language spam.

## MailProve Minder

We provide a simple administrative

interface for managing your company blacklists and whitelists through the web. You can also choose to use a Windows user interface which enables you to perform the same functions but additionally allows you to easily upload email addresses to your whitelist from either Outlook Express, Palm Address Book and files in Comma Separated Value format or LDAP Data Interchange Format.

### Supported MTAs

A wide range of Mail Transfer Agents are supported. The most commonly used ones are listed here:

- |               |                |

**No hardware**  
**No software**  
**Just connect**  
 For **less** than US\$1 per day!

### Company Background

Founded in early 2003, MailProve aims to be the de-facto anti-spam service provider in Asia Pacific. The CEO and founder of MailProve is Jeffrey Vong, a well known and reputed internet technology pioneer in Asia Pacific; he is also a founding member of the Hong Kong ISP association. The company's Super Blacklist service enables businesses to effectively and efficiently block email spam, whilst also providing for whitelist and blacklist customisation by client companies.
